How Limbo Works: The Core Mechanics

To comprehend the Limbo casino game, gamers need to comprehend 3 primary metrics: **Bet Amount**, **Target Multiplier**, and **Win Chance**. These 3 variables are fundamentally connected by mathematical formulas figured out by the house edge.

1. **Bet Amount:** The stake the player wants to risk on the round.
2. **Target Multiplier:** The objective the player sets (e.g., 2.00 x, 10.00 x, or perhaps 1,000,000 x).
3. **Win Chance:** The analytical possibility of hitting the target multiplier, typically revealed as a portion.

Because of your home edge (typically around 1%), the mathematical win possibility is slightly lower than the pure inverse of the multiplier. For example, a 2.00 x multiplier does not offer a 50% chance of winning, but rather a 49.5% chance (assuming a 1% house edge).
