### 1. The Win-Stay, Lose-Shift Strategy

Extensive data from competitive RPS tournaments reveals a consistent behavioral pattern regarding how people respond to the previous round's outcome:

- **If a player wins a round:** They tend to throw the same gesture again (e.g., if Rock won, they will likely toss Rock once again).
- **If a gamer loses a round:** They tend to move to the gesture that *would have beaten* what just beat them. (e.g., if their Scissors lost to Rock, they will likely throw Paper in the next round).

Understanding this cycle allows a sharp bettor to expect the opponent's next move based entirely on the result of the previous round.

### 2. The Psychology of "Rock"

Novices and casual gamers overwhelmingly prefer **Rock** in the very first round of a match. Psychologically, Rock seems like a strong, aggressive, and safe opening choice. Understanding this, an experienced RPS bettor will frequently open with **Paper** in round one, taking advantage of the opponent's natural predisposition towards the heaviest hand.

### 3. Verbal Priming and Tells

In live settings or video-chat gambling environments, challengers frequently leak information through spoken cues or physical micro-expressions.

- **Subliminal Priming:** Casually mentioning a shape in discussion right before the toss (e.g., "*I seem like burying this game*" or "*That was as clear as paper*") can unconsciously influence the opponent to select that specific product.
- **Physical Tells:** Watch the challenger's hand tension. A tightly closed fist generally suggests Rock, while a loose, unwinded hand often precedes Paper.
