What is the Towers Game?

At its core, the Towers game is a vertical progression game influenced by the timeless principle of climbing a structure while preventing covert risks. Players exist with a grid-- usually represented as a series of rows and columns-- forming a tower.

The primary goal is basic: **select a tile in each row to climb up higher.**

- Each successful step up increases the multiplier, thus improving potential winnings.
- Picking the wrong tile triggers a "loss" (typically symbolized by a trap, a gargoyle, or a collapsing block), resulting in the forfeit of the existing round's stake.

The charm of the game lies in its flexibility. Players can select to cash out at any time, locking in their present multiplier, or press their luck for a higher payout.

Gameplay Mechanics and Difficulty Levels

One of the defining functions of the Towers game is its personalized risk profile. Before starting a round, players generally pick a trouble mode. This determines the grid size (variety of columns per row) and the ratio of safe tiles to surprise dangers.

Difficulty Mode	Grid Layout (Cols x Rows)	Safe Tiles per Row	Threat Level	Max Potential Multiplier
Easy	4 x 9	3	Low	Moderate
Medium	3 x 9	2	Safe/ 1 Trap	Medium
Tough	2 x 9	1	Safe/ 1 Trap	High
Very High	1 x 9	0	Safe/ 1 Trap	High
Specialist	3 x 9 (Multiple Traps)	1	Safe/ 2 Traps	Severe
				Huge

The flexibility of these modes enables both conservative gamers-- those who choose constant, incremental gains-- and high-risk thrill-seekers to find a playstyle that suits them.
