3. **The Climb:** As the things ascends, the multiplier ticks up in real-time. It can stop at 1.01 x, or it can skyrocket past 100x, 500x, or even higher.

- **The Risk:** A single early crash (e.g., at 1.02 x) can erase the earnings of several successful rounds if the bet size isn't handled thoroughly.

2. The Martingale System (Aggressive Recovery)

- **How it works:** Doubling the bet size after every loss, with the objective of recuperating all previous losses and protecting a revenue equivalent to the initial stake upon a win.
- **The Goal:** To ride out a losing streak up until a successful round hits.
- **The Risk:** Requires an enormous bankroll and can quickly activate table limitations or monetary ruin during an extended streak of early crashes.

3. The Dual-Bet Strategy (Balanced)

- **How it works:** Placing 2 separate bets on the exact same round. Bet A is set to auto-cashout early (e.g., 2x) to cover the cost of both bets, while Bet B is delegated ride for a high multiplier.
- **The Goal:** To protect a baseline win while keeping a lotto ticket-style chance at an enormous payout.
