How the Mechanics Work

Online versions of high-risk games rely greatly on Random Number Generators (RNG) or blockchain-based provably fair algorithms. Unlike a physical revolver where physics, wear-and-tear, and gravity determine the spin, digital Russian roulette is governed by mathematics.

Common Gameplay Loop:

- **The Ante:** The player chooses their stake (genuine cash or cryptocurrency).

- **The Odds Setting:** Depending on the variation, gamers might choose the number of "bullets" in a standard 6-chamber cylinder, or play with increasing multipliers where the risk scales with each successful click.
- **The Trigger:** The player clicks "Shoot" or "Spin."
- **The Outcome:** If the chamber is empty, the gamer wins the round or advances to a higher multiplier. If the chamber contains a round, the gamer loses their whole stake for that round.
