- **Server Seed:** The website generates a random string of numbers and secures it (hashes it) before the spin, revealing it to the player.
- **Customer Seed:** The gamer's web browser generates a random string.
- **Nonce:** A number that increments with every bet positioned.
- **The Result:** Once the spin concludes, the unencrypted server seed is revealed. Players can plug the server seed, customer seed, and nonce into an independent verifier to show that the outcome was predetermined and untampered with.
