- **The Reaction to Wins:** When gamers win a round, they often have a cognitive predisposition that informs them to throw the winning shape once again, or they transition to the shape that the challenger might anticipate them to avoid.
- **The Illusion of Control:** Players frequently try to overcomplicate their decision-making, causing foreseeable series or loops.

- **Making use of the Novice:** If betting an amateur or casual gambler, try to find the Rock predisposition. Open with Paper, as it defeats Rock and provides you an immediate statistical benefit.
- **Pattern Recognition (Shot-Tracking):** In longer gambling sessions, keep mental or physical notes of your opponent's sequences. Do they favor Paper after a tie? Do they stubbornly toss Scissors three times in a row? Capitalize on these routines.
