The Anatomy of CS2 Gambling Sites

CS2 gambling platforms run primarily on a peer-to-peer (P2P) economy or through Steam API combination. Instead of wagering traditional fiat currency (like GBP or EUR) directly on every website, users generally deposit CS2 skins, which are valued in site credits or cryptocurrency.

When a user deposits a skin, the platform's bot trade system takes the item. The user's account is then credited with a corresponding balance based upon present market price. When withdrawing, the procedure is reversed: users trade their site balance for brand-new skins offered by the platform's stock.
