At its core, crash gambling is a multiplayer online betting game based upon an increasing multiplier curve. The game is simple in idea: a multiplier begins at 1.00 x and begins to climb quickly. Gamers put a bet before the round [crash gambling](#) starts and must manually "money out" before the game arbitrarily "crashes."

If a player cashes out successfully before the crash, they win their initial bet increased by the existing worth. However, if the video game crashes before they squander, they lose their entire stake. The unpredictable nature of the crash point-- which is identified by a cryptographic provably reasonable algorithm-- produces a high-stakes environment where greed and doubt are a gamer's worst enemies.
