The goal is basic:

1. The player chooses a stake amount.
2. A ball (or disc) is dropped from the top of a triangular pyramid made of rows of pegs.
3. As the ball falls, it bounces arbitrarily left and straight off the pegs.
4. The ball eventually lands in one of the slots at the bottom of the board, each carrying a specific multiplier worth.
5. The player's payment is calculated by multiplying their initial bet by the value of the slot where the ball lands.

- **Row Selection:** Most games enable users to choose the number of rows of pegs the board has-- generally ranging from 8 to 16 rows. More rows suggest more complex courses and greater prospective maximum multipliers.
