In a land-based gambling establishment setting, this was historically done by hand, but contemporary online gambling establishments rely on sophisticated RNG software or blockchain technology to guarantee absolute fairness. In crypto-casinos particularly, "provably reasonable" algorithms allow players to separately confirm that the outcome of each flip was genuinely random and not controlled by the home.

Understanding the House Edge

In a theoretical fair game, a £ 10 bet on Heads would return £ 20 total (£ 10 earnings). However, in a casino environment, the payment is usually adjusted, or a commission (vig) is taken. Alternatively, some contemporary online coin flip video games keep true 50/50 odds on the win, but include a subtle home edge built into side bets or progressive prize contributions.
