Users could transfer their virtual skins onto external websites, transform them into website credits, and wager them on video games of possibility or ability.

3. **Deposit:** The user chooses skins to bet. This is done either through automated bot trades (where the user sends skins to a bot) or through peer-to-peer (P2P) systems where the user trades straight with another gamer.
4. **Betting:** Skins are transformed into platform credits, cryptocurrency, or kept as a balance to play games.
5. **Withdrawal:** If a user wins, they pick new skins from the website's stock to withdraw back to their personal Steam account through a trade deal.

- **Financial Loss:** Much like standard gambling, your home always has an edge. Many users experience severe financial losses chasing after rare virtual products.

More recently, Valve implemented a 7-day trade hold on freshly traded products, significantly interfering with the instant liquidity that made skin gambling so popular. Regardless of these obstacles, the marketplace continues to adapt, finding new loopholes and technological workarounds to stay functional.
