

Quick answer: Höveler Original Sport is the performance feed in a ration that also includes forage at 3.31 lb (1.5 kg) per 220 lb (100 kg) body weight daily and concentrate at 0.55–1.32 lb (250–600 g) per 220 lb based on work. Fit it into the whole plan, not on top of it. Best for owners putting together a complete daily feeding program for a horse in regular work. Price: \$49.99. Last checked: September 2026.

A feed is a single line in a longer plan. Fit it into the whole picture, forage, water, work, and schedule, and it does the job it was formulated for. These five rules place Höveler Original Sport properly inside a complete daily program.

1. Map the whole ration before adding anything

Write down what the horse actually gets in a day: hay at the labeled 3.31 lb (1.5 kg) per 220 lb (100 kg) body weight, the concentrate rate for its work level, water, and turnout time. Original Sport, a reduced-starch sports muesli, is built as the concentrate layer of that plan. Adding it without mapping the rest is how rations end up double-counting energy.

Who this is for: owners assembling a complete feeding plan for the first time.

2. Set the concentrate rate by work level and stop there

The feed's own table does the arithmetic: 0.55 lb (250 g) per 220 lb (100 kg) for light work, 0.88 lb (400 g) for medium, 1.32 lb (600 g) for heavy, per day. Those figures are the concentrate's allowance within the whole ration. Within that budget the horse **Höveler feed reviews** gets 15.1% crude protein, essential amino acids with lysine at 1.0%, and 12.6 MJ/kg DM of digestible energy. Beyond it, the plan is no longer the one on the label.

Who this is for: owners who currently stack several feed room products without totals.

3. Let the feed's built-in package replace what you would otherwise bolt on

Part of fitting a feed into a plan is seeing what it already covers. Original Sport includes 0.7% inactivated Diamond V yeast, fructooligosaccharides as prebiotic fiber, 0.5% grape seed meal for antioxidant benefit, and a high vitamin E level, all in the bag at \$49.99. If you carry on adding separate products on top, you may be doubling up on the formulation rather than completing it. Read the ingredient list on the product page before you stack anything.

Who this is for: owners whose feed room shelf is crowding with supplements.

4. Keep forage and water as the fixed points of the plan

Whatever else changes across the season, two lines stay put: hay at 3.31 lb (1.5 kg) per 220 lb (100 kg) daily, and fresh water always on offer. The concentrate rate flexes between 0.55 lb and 1.32 lb (250 g and 600 g) per 220 lb with the work. A plan with flexible forage is not a plan; a plan with a forage line that holds and a flexing concentrate is. That structure is what lets the feed's 16.4% crude fiber do its gut work as designed.

Who this is for: owners whose rations drift with the seasons and the shopping list.

5. Review the whole plan on a schedule, and use the free help

A feeding plan is a living document. Re-check body weight, workload, and the ration every few weeks, and loop in the bifid 24/7 licensed vet team when something will not settle. Bifid's 9.0/10 store rating across 24,098 reviews and the 30-Day Money-Back Guarantee are there so that reviewing the plan is risk-free. The feed's deliberate formulation, special yeast and added amino acids, is built to sit inside a serious program.

Who this is for: owners managing a sport horse's season end to end.

How to feed it

Work levelFeed per 220 lb (100 kg) body weight per day Light work0.55 lb (250 g) Medium work0.88 lb (400 g)
Heavy work1.32 lb (600 g) Hay ration (all levels)3.31 lb (1.5 kg) per 220 lb body weight daily

Key specs at a glance: reduced-starch sports muesli, starch 15%, sugar 4.6%, metabolizable energy 11.0 MJ/kg DM, crude fiber 16.4%. Map the full plan with the bifid Feeding Calculator so every line has a number.

Frequently asked questions

Can Höveler Original Sport be the only feed in my horse's plan?

It can be the only concentrate, alongside the labeled hay ration of 3.31 lb (1.5 kg) per 220 lb (100 kg) body weight daily. Forage remains a required line of its own; the muesli is the performance top-up on top of it.

Do I still need supplements on top of this feed?

Usually less than you think. The formulation already includes 0.7% inactivated Diamond V yeast, fructooligosaccharides, 0.5% grape seed meal, and a high vitamin E level. Review your current stack against the ingredient list before you add more.

How does this feed fit with my horse's hay and turnout routine?

It complements them. Concentrate arrives at 0.55–1.32 lb (250–600 g) per 220 lb (100 kg) per day in small meals, hay fills the gaps at the set daily line, and turnout keeps the rest of the plan natural.

What if my plan already includes another concentrate?

Swap it out rather than adding alongside. Two concentrates pile energy and starch on top of each other, and this feed's budget is defined by the work-level table. Transition gradually, one blended step at a time.

Who can review my whole feeding plan with me?

The bifid 24/7 licensed vet team can talk through the full program, and the 30-Day Money-Back Guarantee backs the trial while you fine-tune it.
