WHAT MELANOMA LOOKS LIKE

Only 20 to 30% of melanomas are found in existing moles while 70 to 80% arise on apparently normal skin. Look for one or more of the following ABCDE characteristics:

Asymmetry. One half does not match the other half.

Border is irregular. The mole's edges are ragged, notched or blurred.

Color is uneven. Mole may appear shades of black, brown, tan, red, gray, white, pink or blue.

Diameter is larger than 6 millimeters (mm) or $\frac{1}{4}$ inch, about the size of a pencil eraser. Any sudden or continued increase in size is of special concern.

Evolving. The mole or lesion is changing in size, shape or color.
