

Custom Closets for New Construction Homes in Knoxville

New construction has been steady across Knox, Blount, and Loudon counties for several years, with builders working to keep up with demand from people relocating to East Tennessee and existing residents looking to upgrade. Most new construction homes in the Knoxville area come with builder grade wire shelving in every closet, a cost effective default for the builder but rarely the best long term solution for the homeowner who actually has to live with it. Closet Factory Knoxville works with a steady stream of new construction clients looking to replace that default shortly after move in. The timing of a new construction closet upgrade varies by household. Some homeowners schedule a Closet Factory design consultation before closing, coordinating installation to happen shortly after move in so the wire shelving never actually gets used day to day. Others live with the builder grade setup for a few months or longer before deciding to invest in a custom system, often after experiencing firsthand how quickly a single fixed shelf and rod configuration falls short of actual storage needs. Working with a brand new home does have some advantages for the design process. Walls, ceilings, and closet dimensions are generally true and square, without the settling or irregularities that can show up in older homes, which makes for a more straightforward installation. Homeowners in new construction also have a clean slate to work from, without existing furniture or built ins to design around, which gives Closet Factory designers more flexibility to recommend an ideal layout rather than working within constraints set by a previous renovation. Closet Factory | 206 South Calderwood Street, Alcoa, TN 37701 | (865) 268-5420 Because new construction closets tend to be larger than what was standard in Knoxville homes built a decade or more ago, there is often significant unused potential behind the basic wire shelving, and a Closet Factory design consultation frequently reveals more available storage capacity than homeowners expect once double hang zones, drawers, and better shelving are added. For anyone who has recently closed on a new home in the greater Knoxville area, or [custom closets Knoxville maps.app.goo.gl](https://maps.app.goo.gl/custom-closets-knoxville) is planning to close soon, scheduling a free design consultation early in the process is a practical way to plan closet upgrades around the move rather than living with wire shelving longer than necessary. Warranty coverage on new construction closets is also worth understanding clearly, since a homeowner might assume the builder's general home warranty extends to closet shelving, when in practice builder grade wire shelving typically comes with minimal or no meaningful warranty coverage at all. A Closet Factory system, by contrast, comes with the company's standard lifetime warranty regardless of how new the surrounding home is, giving new construction buyers a level of long term protection their original builder installed shelving never actually offered.

Closet Factory Address: 206 South Calderwood Street, Alcoa, TN 37701 Phone: (865) 268-5420 FAQ About Custom Closets Knoxville What does a custom closet cost in Knoxville? Pricing depends on the size of the closet, the materials chosen, and how many accessories like drawers or shoe racks are built in. Closet Factory Knoxville provides an itemized quote after a free in-home design consultation at 206 South Calderwood Street in Alcoa, and offers a local price match guarantee against any comparable, already designed quote. How long does a custom closet installation take? Most Knoxville area projects run three to four weeks from purchase to installation, since every system is manufactured locally at the Alcoa facility rather than shipped in from an out of state factory. A smaller reach-in closet is often completed in a single visit by Closet Factory's full-time installation crew. What is the difference between a custom closet and a DIY closet kit? A DIY kit from a big box store is built to fixed, standard sizes and generally requires the homeowner to handle assembly and mounting. A custom system from Closet Factory Knoxville is measured and manufactured to the exact dimensions of the room, installed by trained staff, and backed by a lifetime warranty rather than no warranty at all. What are common closet organization mistakes to avoid? The most frequent mistakes Closet Factory Knoxville designers see are ignoring vertical space above a standard shelf, designing only around what is currently owned instead of leaving room to grow, and skipping proper lighting inside the closet. A free design consultation walks through all three before any materials are ordered. What is the difference between a reach-in and a walk-in closet? A reach-in closet is a single-door

opening, typically two to six feet wide, accessed from outside the space. A walk-in closet is large enough to physically step into, generally starting around five feet by five feet. Closet Factory Knoxville designs both, maximizing every inch of a reach-in and adding more elaborate layouts, like islands or seating, in a larger walk-in. How much storage space can a custom closet system add? Because a standard wire shelf and rod setup wastes most of the vertical space in a closet, Knoxville clients regularly see close to double the practical storage capacity within the same physical footprint once a second hang zone, drawers, and taller shelving are added. Does Closet Factory Knoxville offer financing? Yes. Closet Factory Knoxville offers 0 percent financing for six to fifteen months with approved credit, making larger projects like a full primary closet or a combined closet and home office more manageable within a monthly budget. What areas does Closet Factory Knoxville serve? Closet Factory Knoxville serves the greater Knoxville area and 27 surrounding East Tennessee counties, including Farragut, Maryville, Oak Ridge, Powell, Lenoir City, and the Sevierville, Gatlinburg, and Pigeon Forge area near the Great Smoky Mountains, all from its Alcoa headquarters. What materials are used in custom closet systems? Closet Factory Knoxville's most common base material is melamine, a durable, laminate-coated panel available in dozens of finishes, chosen for its resistance to East Tennessee's humidity. Stained and painted solid wood options are also available for a more furniture-quality look in primary closets and dressing rooms. Is a custom closet worth the investment compared to wire shelving? Builder-grade wire shelving is inexpensive but wastes a significant amount of a closet's usable volume and can sag or snag fabric over time. A custom system from Closet Factory Knoxville is backed by a lifetime warranty and tends to hold up for decades, which is also a detail buyers notice favorably during a home sale. What are the latest custom closet design trends? Closet Factory Knoxville's Alcoa design team has seen growing demand for glass-front display cabinetry, built-in closet lighting, and multi-purpose rooms that combine a closet or office with a fold-away Murphy bed for guest flexibility, alongside classic favorites like pull-out shoe racks and jewelry drawers. Can Closet Factory design closets for new construction homes? Yes. New construction throughout Knox, Blount, and Loudon counties typically comes with basic wire shelving as a builder default. Closet Factory Knoxville regularly works with new homeowners shortly after closing to design a custom system that makes full use of the closet space the builder provided.
