Unlike the historic video game where the goal was to clear a grid without hitting a mine, Mystery Mines allows gamers to set their own danger criteria. Gamers place a stake and browse a grid filled with surprise tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The goal is simple: reveal as numerous multipliers as possible without clicking a mine. Each effective click increases the gamer's potential payment, while hitting a mine results in the loss of the existing stake. The core appeal of the game lies in the "money out" mechanic, which allows players to protect their jackpots at any minute before proceeding to the next tile.

How the Game Mechanics Work

The game counts on a Provably Fair algorithm, making sure that the positioning of mines is randomized and verifiable. When a round starts, the server generates a grid-- generally 5x5-- and disperses an established variety of mines throughout it. The gamer then connects with the grid in the following sequence:

1. **Setting the Parameters:** Before the very first click, the player selects their bet amount and the variety of mines they want to consist of in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The gamer clicks a tile. If it is a multiplier, the balance increases, and the player can choose to "Cash Out" or continue.
3. **The Risk:** If a mine is activated, the round ends immediately, and the stake is surrendered.
4. **The Multiplier Growth:** The more mines picked at the start, the higher the multiplier for each successful tile opened.
