How Case Opening Works

The mechanics behind opening a case are straightforward, yet the odds are carefully defined by Valve:

- 1. Acquisition of a Key**-- Players buy a basic CS: GO Case Key from the in-game shop or the Steam Community Market.
- 2. Selection of a Case**-- The player chooses any available weapon case in their inventory.
- 3. Opening Process**-- Upon clicking "Open Case", the game runs a random-number generator (RNG) that selects an item based upon an established probability table.

Rarity Probabilities (Typical)

Rarity Tier	Approximate Drop Chance
Customer (Blue)	~ 79.9%
Mil-Spec (Blue)	~ 15.9%
Restricted (Purple)	~ 3.2%
Classified (Pink)	~ 0.64%
Covert (Red)	~ 0.26%
Rare Special Item (Gold)	~ 0.02%

- **Rarity and Float**-- Covert (red) items are naturally more valuable than lower-tier skins, but their *float worth* (a measure of wear) also plays a vital role. Lower float worths (closer to 0.00) command premium costs.
- **Need and Popularity**-- Skins that are visually striking or connected with expert players tend to see greater need.
- **Supply**-- The number of products in circulation, which is limited by the case's drop rate and the overall number of keys purchased, directly impacts shortage.
- **Market Events**-- Seasonal sales, major competitions, or brand-new operations can cause price changes as new items enter the market and older ones become rarer.

Comprehending these variables helps gamers make more informed decisions when going into the case-opening economy.
